> Customer Management System	✓

Application timescales & process

The process should take **10 - 14 working days** from time of providing all your accompanying documents and check the information that you have provided.

Virtual Terminal - The original and still the best!

Web Merchant Services provide a FREE web based payment terminal that is a secure, browser-based interface that will enable your business to process credit card transactions. You don't even need a website*. You can also have multiple users using the virtual terminal at any one time. This means you can use it in a shop or call centre environment. No more having to wait for one person to process a transaction before another can be taken.

Repeat Billing Facility

With the World Account you can offer your customers two new ways to pay for goods and services: regular or limited. In a Regular agreement, payments occur at regular intervals, and you can either fix the amount at the start or vary it as needed. A Limited agreement allows variable payments to be taken at any time, within the limits that you have placed on the amount and the frequency of the payments. With the World Account the FuturePay facility is a one off payment of £115

Integrating your website with Web Merchant

There are numerous ways to integrate your eCommerce website with the Web-Merchant service. The method you choose will depend on your individual requirements. All guides, manuals and API's are available from our website to download.

Anti-Fraud Solutions

Security is probably one of the most significant concerns for both the shopper and the retailer during an online transaction. In reality an online transaction is probably more secure than a card transaction in a shop or conducted over the telephone or by fax, as the information transmitted online is highly encrypted using complicated logarithm combinations. All three accounts come with anti-fraud solutions as standard helping you to avoid fraudsters and tipping you off when a transaction looks suspicious or too good to be true.

The anti-fraud solution supports the latest international security checks including MasterCard SecureCode and Verified by Visa. Plus, you can configure your own security checks using our online management facilities.

For much more information on all the above features, plus many many more, please visit us at:
